

### 3 Modular Inverses

Recall the definition of inverses from lecture: let  $a, m \in \mathbb{Z}$  and  $m > 0$ ; if  $x \in \mathbb{Z}$  satisfies  $ax \equiv 1 \pmod{m}$ , then we say  $x$  is an **inverse of  $a$  modulo  $m$** .

Now, we will investigate the existence and uniqueness of inverses.

- (a) Is 3 an inverse of 5 modulo 10?
- (b) Is 3 an inverse of 5 modulo 14?
- (c) Is each  $3 + 14n$  where  $n \in \mathbb{Z}$  an inverse of 5 modulo 14?
- (d) Does 4 have inverse modulo 8?
- (e) Suppose  $x, x' \in \mathbb{Z}$  are both inverses of  $a$  modulo  $m$ . Is it possible that  $x \not\equiv x' \pmod{m}$ ?

### 4 Fibonacci GCD

The Fibonacci sequence is given by  $F_n = F_{n-1} + F_{n-2}$ , where  $F_0 = 0$  and  $F_1 = 1$ . Prove that, for all  $n \geq 1$ ,  $\gcd(F_n, F_{n-1}) = 1$ .
