Sundry

Before you start writing your final homework submission, state briefly how you worked on it. Who else did you work with? List names and email addresses. (In case of homework party, you can just describe the group.)

1 Administrivia

(a) Make sure you are on the course Piazza (for Q&A) and Gradescope (for submitting homeworks, including this one). Find and familiarize yourself with the course website. What is its homepage’s URL?

(b) Read the policies page on the course website.

   (i) What is the breakdown of how your grade is calculated?
   (ii) What is the attendance policy for discussions?
   (iii) When are homeworks released and when are they due?
   (iv) How many "drops" do you get for vitamins? For homework?
   (v) When is the midterm? When is the final?

2 Course Policies

Go to the course website and read the course policies carefully. Leave a followup on Piazza if you have any questions. Are the following situations violations of course policy? Write "Yes" or "No", and a short explanation for each.

(a) Alice and Bob work on a problem in a study group. They write up a solution together and submit it, noting on their submissions that they wrote up their homework answers together.

(b) Carol goes to a homework party and listens to Dan describe his approach to a problem on the board, taking notes in the process. She writes up her homework submission from her notes, crediting Dan.
(c) Erin comes across a proof that is part of a homework problem while studying course material. She reads it and then, after she has understood it, writes her own solution using the same approach. She submits the homework with a citation to the website.

(d) Frank is having trouble with his homework and asks Grace for help. Grace lets Frank look at her written solution. Frank copies it onto his notebook and uses the copy to write and submit his homework, crediting Grace.

(e) Heidi has completed her homework using \LaTeX. Her friend Irene has been working on a homework problem for hours, and asks Heidi for help. Heidi sends Irene her PDF solution, and Irene uses it to write her own solution with a citation to Heidi.

(f) Joe found homework solutions before they were officially released, and every time he got stuck, he looked at the solutions for a hint. He then cited the solutions as part of his submission.

3 Use of Piazza

Piazza is incredibly useful for Q&A in such a large-scale class. We will use Piazza for all important announcements. You should check it frequently. We also highly encourage you to use Piazza to ask questions and answer questions from your fellow students.

(a) Read the Piazza Etiquette section of the course policies and explain what is wrong with the following hypothetical student question: "Can someone explain the proof of Theorem XYZ to me?" (Assume Theorem XYZ is a complicated concept.)

(b) When are the weekly posts released? Are they required reading?

(c) If you have a question or concern not directly related to the course content, where should you direct it?

4 Discussion Assignment

Please confirm that you have signed up for one of the discussion sections at https://piazza.com/class/l3oobgzdjn57j8?cid=23. What is the name of your GSI and the time of your discussion section?

5 Remote Course Option

Although this class is designated to be in-person and we strongly recommend taking the class in-person, we are facilitating remote options for those who are not physically at Berkeley. We ask everyone to fill out this form.

(a) What is the secret phrase?
6 Academic Integrity

Please write or type out the following pledge in print, and sign it.

I pledge to uphold the university’s honor code: to act with honesty, integrity, and respect for others, including their work. By signing, I ensure that all written homework I submit will be in my own words, that I will acknowledge any collaboration or help received, and that I will neither give nor receive help on any examinations.

7 Implication

Which of the following implications are always true, regardless of \( P \)? Give a counterexample for each false assertion (i.e. come up with a statement \( P(x,y) \) that would make the implication false).

(a) \( \forall x \forall y P(x,y) \implies \forall y \forall x P(x,y) \).
(b) \( \forall x \exists y P(x,y) \implies \exists y \forall x P(x,y) \).
(c) \( \exists x \forall y P(x,y) \implies \forall y \exists x P(x,y) \).

8 Equivalences with Quantifiers

Evaluate whether the expressions on the left and right sides are equivalent in each part, and briefly justify your answers.

| (a) \( \forall x ( (\exists y Q(x,y)) \implies P(x)) \) | (b) \( \forall x \exists y (P(x,y) \implies Q(x,y)) \) |
| (c) \( \forall x \exists y (P(x) \implies Q(x,y)) \) | \( \forall x (P(x,y) \implies (\exists y Q(x,y))) \) |

9 Preserving Set Operations

For a function \( f \), define the image of a set \( X \) to be the set \( f(X) = \{ y : y = f(x) \text{ for some } x \in X \} \). Define the inverse image or preimage of a set \( Y \) to be the set \( f^{-1}(Y) = \{ x : f(x) \in Y \} \). Prove the following statements, in which \( A \) and \( B \) are sets. By doing so, you will show that inverse images preserve set operations, but images typically do not.

Recall: For sets \( X \) and \( Y \), \( X = Y \) if and only if \( X \subseteq Y \) and \( Y \subseteq X \). To prove that \( X \subseteq Y \), it is sufficient to show that \( (\forall x) ((x \in X) \implies (x \in Y)) \).

(a) \( f^{-1}(A \cap B) = f^{-1}(A) \cap f^{-1}(B) \).
(b) \( f^{-1}(A \setminus B) = f^{-1}(A) \setminus f^{-1}(B) \).
(c) \( f(A \cap B) \subseteq f(A) \cap f(B) \), and give an example where equality does not hold.
(d) \( f(A \setminus B) \supseteq f(A) \setminus f(B) \), and give an example where equality does not hold.
